see if this helps

use Firefox and private browsing...
go to **TOOLS > GET ADD ONS > SEARCH...**
find and install...
adblock plus..
web mail adblocker...

and go to...
TOOLS > OPTIONS > SEARCH and clean up the browsers...
reboot...

been using these for years and no issues..
if you have Google, bing, silverlite or chrome they cause a lot of issues..
(I uninstalled mine)

I have DuckDuckGo as a search engine...
https://duckduckgo.com/
been doing fine for years.. fast simple and it doesn't screw w/ you...
doesn't track you either..
excellent parental controls too...

all of those blockers work hand in hand...
they are made to work together....
don't forget to run your CCleaner...
http://www.piriform.com/ccleaner/download/standard

now you know this is all tailored for Firefox... don't know if any of them work
elsewhere...
if you go w/ DuckDuckGo you HAVE TO shut down, turn off or uninstall your other
browsers. set DDG as default and clean up the listings in TOOLS > OPTIONS >
SEARCH....

got questions..ask away...

when you do run CCleaner, run it and nothing else..

note... the 1st time you run CCleaner it may take a long while...
